Firmware	MX6-PLC from version 1.16.0, CODESYS ab 3.5 SP10 Patch 4
Additional requirements	<ul style="list-style-type: none">— S400 Powertrack Communication option— IP network connection
Restrictions	---

3 Product description

This software option switches the license for the Powertrack SVC3 service tool for the device free.

Powertrack is Berghof's communication system for intralogistics. The service communication (CODESYS online connection, PLC status queries and PLC start/stop/reset) is referred to as SVC3 service channel.

The Powertrack service tool enables cross-segment management of participants in a Powertrack network. The service tool provides the following functions:

- Display of all participants in the network
- Display of the current network segment of the participants in the network
- Display of status information of the participants regarding firmware and CODESYS application
- Execution of control commands on the participants in the network (Start/Stop/Reset/Reboot)
- Simultaneous transfer of files to several/all participants (Broadcast Update)

These are provided web-based on the gateway controller or alternatively by a segment controller (in small networks). A separate application is not required.

The software option "Powertrack Servicetool" is typically required once in a Powertrack network and implemented on the gateway.

4 Technical data

Technical data	
Functions	Web based service tool for Powertrack SVC3 Services, SVC3 Networkmanager
